Moscow International University Ranking 2023.....	10

## About the Project

The Moscow International Ranking “The Three University Missions” (MosIUR) is a fundamentally new academic ranking that, for the very first time in international practice, assesses all three key missions of a university: education, science and interaction with society. Over 100 universities took part in the large-scale public discussion of the ranking methodology. The ranking uses only objective criteria, based on official data (including universities’ public reports), as well as data from reputable international information providers. Reputational surveys are excluded completely.

The rating was initiated by the Russian Union of Rectors and the Association of Rating Makers.

The pilot version of the “Three Missions” was published December 2017. Following versions came out November 2018, September 2019. Starting from 2020, the rating is published annually in August.

The ranking was audited by the PricewaterhouseCoopers Audit, part of the global PwC network.

## Key Facts and Figures

Seventh Edition of The Three University Missions Moscow Ranking released. The Moscow International Ranking “The Three University Missions” (MosIUR) is a fundamentally new academic ranking that, for the very first time in international practice, assesses all three key missions of a university: education, science and interaction with society. This year, MosIUR included 2,000 higher education institutions (HEIs) from 112 countries. 2022, the ranking was made up of 1,800 HEIs. The expansion of the list has been made possible due to increased transparency and competitiveness of numerous universities, mainly from BRICS countries.

The USA is most widely represented in the ranking with 252 universities out of the top 2,000. China is second (232), and Russia is the third (154), followed by the UK (109) and Japan (101).

The upper part of the table is dominated by US universities, same as last year. Harvard (#1) and Massachusetts Institute of Technology (MIT) (#2) topped the ranking, followed by Oxford (#3), Cambridge (#4) and the University College London (#5). Best results among Asian universities were demonstrated by the University of Tokyo (#11) and Peking University (#18).

The best university in Australia and Oceania is the University of Melbourne (#43), and in Latin America – the National Autonomous University of Mexico (#107). The University of Cape Town scored the highest score among African universities (#159). The Lomonosov Moscow State University took the leading position among Russian universities (#17).

Asia leads by the number of universities among all other macro-regions with 637 universities, i.e., almost a third of the entire list. Europe is second with 621 universities. North America lags behind Europe and Asia, representing 288 universities in the ranking. South and Central America - 162 universities. In 2023 Africa for the first time equaled Australia and Oceania in terms of representation in the ranking - 48 universities each. Three African countries made their debut in the 2023 ranking – Algeria, Mauritius and Malawi, whose universities had not previously appeared in the list, but now occupy places in the interval group 1751-2000.

One of the main trends is the strengthening of Asian universities. Over the year, their share in the ranking increased by 2 percentage points and reached 31.9%. At the same time, the result of European universities decreased by the same amount, amounting to 31.1%. For the first time since the Three University Missions ranking was compiled, Asia has surpassed Europe in terms of the number of participants in the list of the best universities on the planet (this statistic does not take into account the universities of Turkey and Russia, as these countries are located in two parts of the world at once). Asian universities on average outperformed their European counterparts in terms of the growth of indicators measuring the success of performance in student competitions, citation rate of scientific papers and specific research budget. At the same time, Asian universities have not yet become highly competitive in terms of export of educational services - on average, the share of foreign students in Asian universities is about three times lower than in Europe, and over the year the average value in Asian universities decreased by 0.3%, while in European universities - increased by 0.2%.

Speaking about the progress of Asian universities in the ranking, we should say about the main locomotive countries: in 2023 they were China and India, which achieved the best results in terms of the number of new entrants in the world top (+30 for China and +20 for India). The success of Chinese universities is largely associated with the improvement of the second, scientific mission indicators - the growth of citation rate of publications and increase in research budget per employee. At the same time, in the countries of the Anglo-Saxon world (UK, USA, Canada, Australia, etc.) these indicators have slightly decreased on average. As for universities in India, the country's universities have made the most progress in terms of «third mission» indicators - for example, the number of online courses has increased by 34% on average. In addition, India is among the top countries in terms of university funding per student (purchasing power parity).

The ranking made it possible to calculate the volume of global exports of high-quality educational services: 3.7 million foreign students study at the top 2000 universities. The largest number of them choose universities in the UK (14%), followed by the USA (13%), Australia (8%), Germany (7%) and Russia (5%).

# Moscow International University Ranking “The Three University Missions” Methodology 2023

The first draft of the Moscow International University Ranking “The Three University Missions” (MosIUR) methodology was developed following a large-scale public discussion with over 100 collective contributors, such as universities, rector councils, expert associations, and rating agencies. The list of ranking criteria was submitted for consideration to the ranking’s International Expert Council, comprised of 25 renowned higher education experts from Belgium, Brazil, China, India, Iran, Italy, Poland, Russia, South Africa, Turkey, the UK, and the USA. Expert discussions continued after the release of the MosIUR pilot version, December 2017. Following the feedback, some ranking indicators were adjusted, and the shortlist of participating universities was expanded to 500. In 2019 the shortlist featured over 1700, in 2020 – over 1800, in 2021 – over 2000, in 2022 – over 2200, and in 2023 – over then 2300 higher education institutions (HEIs), representing 165 countries and territories.

## ***Shortlisted Universities***

The MosIUR 2023 shortlist was largely comprised of about 2200 HEIs shortlisted in 2022. The number of institutions representing any given country was meant to be proportional to the country’s contribution to the world economy. Universities with leading positions in global university rankings and/or national academic rankings listed in the IREG Inventory of National Rankings were included in the evaluation list. In some cases, the selection was based on the number of the university’s academic papers from 2017 to 2020. Furthermore, narrow-focused HEIs, i.e., those without educational programs in at least two out of six research areas according to the Organization for Economic Co-operation and Development (OECD) classification, and HEIs with no Bachelor’s, Master’s and PhD programs or their equivalents were excluded from consideration. Higher education institutions with a student body of less than 500 were excluded from the list as well.

## ***Changes in the system of criteria and calculation methods***

In 2023, a number of changes were made to the rating methodology. Most of the changes affected the sources of information, due to the fact that some of them have ceased to be available or have lost relevance. Green Brain of the Year Contest, McGill Management International Case Competition and LafargeHolcim Awards were excluded from the list of student contests used to calculate the criterion “Amount of student wins in international student contests”. YouTube and Telegram have been added to the list of social networks used to calculate the criterion “Followers on university social media”. Since Alexa.com unavailable, the new operator that is used to calculate the criterion “Coverage of the university website” has become Similarweb.com.

## ***Information Sources***

The ranking uses exclusively objective indicators approved by international experts. Reputational surveys are excluded entirely. Information sources include open access data from official websites of universities and national authorities, as well as data obtained from independent international sources; largest online course platform aggregator “Class Central”; mass education platforms Open Education (Russia) and icourse163.org (China); free content, multilingual online encyclopedia Wikipedia; search engines (Google, Yandex, Baidu); social networks Facebook\*, X (previously Twitter\*\*), VK, Sina Weibo, YouTube, Telegram); Similarweb— one of the world

leaders in web-analytics; bibliometric data providers; international student competition websites and scientific awards from the IREG List of International Academic Awards.

### **Ranking Calculation**

The overall weight of indicators per group is 45% for Education, 25% for Research, and 30% for University and Society.

For each indicator, a score was calculated to characterize the university’s position in relation to its competitors. The calculation was carried out in two ways:

1) For normalized indicators (global and national citations, share of publications and transparency), the score of the participating HEIs was calculated according to:

$$x_i = \frac{a_i - a_{min}}{(a_{max} - a_{min})},$$

Where

$x_i$  is the score of the  $i^{\text{th}}$  indicator

$a_i$  is the value of the  $i^{\text{th}}$  indicator

$a_{max}$  is the maximum value of the  $i^{\text{th}}$  indicator

$a_{min}$  is the minimum value of the  $i^{\text{th}}$  indicator

2) In cases where linear calculation was not applicable, data normalization methods have been used.

Subsequently, scores of universities for each ranking indicator were multiplied by corresponding weight coefficients. Finally, weighted university scores in all indicators were summed up:

$$f = \sum_{i=1}^{n_x} x_i v_i,$$

Where

$f$  is the ranking score

$x_i$  is the score of the  $i^{\text{th}}$  indicator

$n_x$  is the number of ranking indicators

$v_i$  is the weight of the  $i^{\text{th}}$  indicator

## “The Three University Missions” 2023 Indicators

#	Name	Parameters	Weight, %	Meaning	Data source	Details
<b>I. Indicator Group: Education</b>						
1.	Amount of student wins in international student contests	Student competitiveness	7	Unlike common scientometric indicators, that measure academic personnel achievements, this innovative criterion makes it possible to measure student competitiveness. The criterion demonstrates quality of knowledge, skills, and competence, university students obtain during their studies, as well as their ability to use these resources to solve complex tasks. The number of winners of international student competitions and other prestigious international contests cannot be large; however, the number of Prize winners of prestigious contests is a focused way of demonstrating effectiveness of learning and students' aptitudes for breakthrough scientific research.	Websites of international contests	Individual wins and team victories in 14 international student contests*** from 2018 to 2022 are calculated similarly to the Olympics medal tally (considering both prizewinners and medalists). Each contest is given a weight depending on the number of countries covered (for example, the ACM ICPC, which brings together students from over 100 countries, was assigned the maximum weight — 1.00; while NSUCRYPTO and Belgrade Business International Case Competition with participants from as few as 9 countries have a weight of 0.09). The weighted values are summed up.
2.	Share of international students	Attractiveness for international students	8	This indicator shows the proportion of international students to the total number of students. It is widely used by existing academic rankings.	Websites of universities and regulatory bodies	International students of all full- and part-time Bachelor's, Specialist's, Master's, and PhD programs (ISCED-2011 Levels 6-8), that spent more than 3 months in university in the specified year (given to the total of students in full-time Bachelor's, Specialist's, Master's, and PhD training programs). The number of students was converted to full-time equivalent (FTE).
3.	University budget to student ratio	Financial resources	15	This criterion evaluates a university's financial wellbeing. The higher the indicator, the wider the range of opportunities to implement the three main missions of a university: education, scientific research, and contribution to society.	Websites of universities and regulatory bodies	As the cost of products and services may vary significantly from country to country, the budget was converted into USD using purchasing power parity (PPP) defined by the World Bank (or in case the necessary value was not present, PPP defined by OECD). Students of all full- and part-time Bachelor's, Master's, and PhD programs (ISCED-2011 Levels 6-8) were considered. The number of students was converted to FTE.
4.	Student to academic staff ratio	Human resources	15	The indicator measures university staffing. The more faculty and research staff per student, the more attention university staff may give to each student, and, therefore, the better the learning conditions for the latter.	Websites of universities and regulatory bodies	The number of academic personnel (academic staff and researchers) is calculated on FTE basis. Students of all full- and part-time Bachelor's, Master's, and PhD programs (ISCED-2011 Levels 6-8) were considered. The number of students was converted to FTE.

#	Name	Parameters	Weight, %	Meaning	Data source	Details
<b>II. Indicator Group: Science</b>						
5.	IREG List awards won by academic staff and alumni	Outstanding scientific achievements	7	The proposed metric is an elaboration of the approach proposed by the Shanghai ranking. Fundamentally, the idea of counting the number of winners of prestigious prizes to assess a university's scientific potential is correct. However, considering only Nobel and Fields Prizes severely limits the scope for evaluating an HEI. Therefore, we used the IREG List of International Academic Awards, which includes the world's 99 most prestigious scientific awards (with a possibility of expanding the list in the future).	Websites of international awards	The weighted number of awards from the IREG List of International Academic Awards received by academic staff and alumni between 2003 and 2022. Only permanent university staff members as of the date of prize giving are considered. Those who have successfully completed their undergraduate, graduate, and postgraduate studies (and programs equivalent to those listed) are counted as graduates.
6.	Average normalized citation impact (global level)	Quality of scientific publications (international level)	10	Normalized citation impact quantitatively shows how much better or worse than the global average a particular publication is cited compared to publications of the same type, area of knowledge, and year of publication. The indicator demonstrates global relevance of a university's research activities within academia, reflecting its acuteness and quality. Normalized citation indicators are widely used by academic rankings.	Bibliometric data providers	Publications dated 2018-2021 are considered. Normalized citation impact values are calculated separately for six research areas according to OECD classification (Natural Sciences, Engineering and Technology, Medical and Health Sciences, Agricultural Sciences, Social Sciences, Humanities). Scores gained in each area of knowledge are summed up.
7.	Average normalized citation impact (national level)	Quality of scientific publications (national level)	3	This indicator demonstrates global relevance of a university's research activities within academia of its home country. Introducing this criterion contributes to a better consideration of achievements of national research schools and a more accurate research output evaluation in the humanities.	Bibliometric data providers	Publications dated 2018-2021 are considered. This indicator's calculation differs from global level average normalized citation: a ratio of a university's normalized citation impact to its country's respective value is calculated for each of the six research areas. The final value is a relation of the university's result to the best result among universities of its country.
8.	Research income per academic staff member	Involvement of staff in research and development	5	The indicator shows the amount of R&D funds raised per academic staff member. The higher the amount per staff member, the more in-demand university research is. For universities that collect data on expenditure rather than income, the indicator is calculated as expenses (budget) per academic staff member.	Websites of universities and regulatory bodies	Funds attracted for academic research and development, except income from education activities, investment, commercialization etc. In case country-specific features or other peculiarities do not allow to calculate research income, research budget as the amount of money, spent on research, is used. Values are converted into USD using purchasing power parity (PPP) defined by the World Bank (or in case the necessary value is not present, PPP defined by OECD). The number of academic personnel, including teaching and research staff, is calculated on FTE basis.

#	Name	Parameters	Weight, %	Meaning	Data source	Details
<b>III. Indicator Group: University &amp; Society</b>						
9.	Amount of Massive Open Online Courses (MOOCs)	Contribution to affordable online education	6	This innovative indicator, applied for the first time in the practice of global academic rankings, measures a university's activity in developing MOOCs. There is a clear public demand for open online courses, and the fact that this education activity is rapidly developing is beyond doubt. The more courses are published on online platforms, the broader the knowledge a university delivers through the internet, and the greater its contribution to the accessibility of education worldwide.	“Class Central” aggregator, Open Education, icourse163.org	Total number of MOOCs published on online learning platforms, considered by “Class Central”, as well as on Open Education and icourse163.org, at the time of data collection (June 2023). Each platform is weighted according to the number of course-participants of that platform (Coursera, edX, FutureLearn, Open Education and icourse163.org have a maximum weight of 1.00). Obtained weights are summed up.
10.	University's share in total national publications	Contribution to a country's scientific research	4	This innovative ranking indicator measures national significance of universities for scientific development in their respective countries. The higher a university's share in country's total university publications, the bigger its contribution to research in the country, and consequently, the higher such a university's importance and value for society.	Bibliometric data providers	Ratio of a university's scholarly output, measured by the total number of academic papers published 2017-2020, to its home country's scholarly output. The final value is a relation of the university's result to the best result among universities of its country.
11.	Total pages of a university's website indexed by leading search engines	Web presence	3	The indicator evaluates a series of the most important aspects of a university's interaction with society: openness and transparency, information availability, commitment to information exchange.	Google, Baidu, Yandex	The number of web pages of a university's official domain, indexed by search engines, is measured by standard domain search syntactical operators of Google, Baidu and Yandex search engines. The minimum index value according to each engine was determined after a series of data retrievals in April and May 2023. The highest result of the three search engines is used as the final value.
12.	Views of the university's page on Wikipedia	Popularity on the web	1	Along with the official university website, Wikipedia is an important source of information. Many views on the university's page on Wikipedia testify to a university's impact on society.	Wikipedia	Total views of university Wikipedia pages in English and (if applicable) in official national language (languages) in 2022.
13.	Followers on university social media	Communication on social media	3	Social media is one of the most practical communication tools for the university and those interested in its activity. A significant number of universities creates awareness of their activities through social media. The popularity of different social networks varies in different countries and from university to university. Therefore, the number of subscribers on 6social medias is collected for each university.	Facebook*, X (previously Twitter**), VK, Sina Weibo, YouTube, Telegram	The number of subscribers on university social media Facebook*, X (previously Twitter**), VK, Sina Weibo, YouTube, Telegram on English and pages in national languages (if applicable) are considered. The final score is a sum of subscribers in two social networks, where a university has its largest audience.

#	Name	Parameters	Weight, %	Meaning	Data source	Details
14.	Number of alumni with an individual article about them on Wikipedia	Alumni impact on society	7	Quality education is made up of largely incommensurable phenomena, including the extent to which a university has an impact on society. One of the most effective ways to measure this is to count the number of alumni who are successful in various areas (politics, science, art, business, charity) and possess an individual article about them on Wikipedia. This indicator quantifies the university's impact on society	Wikipedia	Total number of university alumni with a personal page on Wikipedia meeting following criteria: alumnus date of birth not prior to 1952 and at least 1000 page views in 2022. Unpopular pages are thus excluded from calculation.
15.	University website reach	Societal relevance	4	This indicator reflects relevance of a university's official website for users from all over the world. The higher the visit ratio, the more popular a university is. If the website is visited by many Internet users, then the university is considered relevant and valuable for society.	Alexa	This criterion evaluates a university's website amount of unique users during the month. Data was provided by one of the global leaders in web analytics Similarweb (similarweb.com) and compiled June 2023.
16.	Transparency	Informational openness and quality of information policies	2	This indicator is a complex evaluation of university policies related to informational openness to society, their consistency, and extent to which a university encourages horizontal communication.	Websites of universities	This indicator considers the availability of following resources, materials, and publications on a university's official website: up-to-date institutional report, up-to-date financial report, open access list of university staff (or open access staff search system), mission of the university.

\* banned in the Russian Federation; belongs to the Meta Corporation, which is recognized as extremist in the Russian Federation.

\*\* blocked in the Russian Federation.

\*\*\* list of student contests:

- ACM International Collegiate Programming Contest
- Belgrade Business International Case Competition
- International Mathematics Competition for University Students
- John Molson Undergraduate Case Competition
- Network of International Business Schools Worldwide Case & Business Plan Competitions
- NSUCRYPTO
- SCORE Software Engineering Contest
- The Annual Willem C. Vis International Commercial Arbitration Moot
- The Mathematical Contest in Modeling
- The Philip C. Jessup International Law Moot Court Competition
- The SIAM Award in the Mathematical Contest in Modeling
- The University Physics Competition
- The World Universities Debating Championships
- Global Investment Banking Valuation Olympiad

## Appendix. The Three University Missions Moscow International University Ranking 2023

Rank*	University name	Country
1	Harvard University	United States
2	Massachusetts Institute of Technology	United States
3	University of Oxford	United Kingdom
4	University of Cambridge	United Kingdom
5	University College London	United Kingdom
6	Stanford University	United States
7	Columbia University	United States
8	ETH Zurich – Swiss Federal Institute of Technology Zurich	Switzerland
9	Imperial College London	United Kingdom
10	University of Chicago	United States
11	University of Tokyo	Japan
12	Johns Hopkins University	United States
13	University of Pennsylvania	United States
14	University of Michigan	United States
15	New York University	United States
16	Yale University	United States
